

Structural Bearing Assemblies

Versiflex™ HLMR Disc Bearing Assemblies Fixed DF Series - 10%

Design Basis: AASHTO 17th Edition w/ Interims – Section 14

Rotation: 0.02 Radians

Horizontal Capacity: 10% of Vertical Capacity

Movement: X = 0"

Y = 0"

Steel Strength: Fy = 50 ksi

Design Considerations

- A. Bearing assembly component dimensions are based on assumed structural conditions and a skew of 0°.
- B. Sole plates are designed for a welded connection to a steel girder flange. Sole plate dimensions will vary for bolted connections to steel flanges and/or for bearings supporting concrete superstructure elements.
- C. Masonry plate information has been excluded from the bearing details. Masonry plate dimensions are based on the allowable bearing stress of the substructure unit and the anchorage requirements.

A recommended method of determining the masonry plate thickness is to use a 60° load distribution through the plate. The effective loaded area should be used to calculate the bending moment of the plate and the concrete bearing pressure.
