

Tensar[®]
InterAx[™]

“I expect that using InterAx in our equipment yard will really make the roads last with minimal maintenance. Support from Tensar during design and construction was top end.”

Chris Carry, P.E.
Sitework and Heavy-Highway Dept. Manager
Mosser Construction

Costly delays, strained budgets and even project failures are all too common in civil construction.

Missed deadlines due to sitework challenges cause a chain reaction of issues that often lead to headaches on the rest of the job. But you can tell a different story - a story of **building with confidence and maximizing project savings** without cutting corners.

Partnering with Tensar puts you in control, increasing construction efficiency and eliminating the risks that create rework. We have invested millions of dollars in ongoing research to provide sitework solutions that often result in significant cost savings for our clients around the world. And now, those decades of research, development and innovation have resulted in Tensar’s latest achievement: **the introduction of Tensar’s InterAx Geogrid.**

PROVEN SUCCESS

Successful clients and construction excellence have been Tensar's mission for over fifty years.

- Our customers have specific needs on every project. We work with you to find the best solution for each challenge.
- Our customers value a partner, not just a product. We're with you at every step of your project, from planning through construction.
- Our customers need the right answer the first time. Our fully tested products and our team of experts prevent surprises.

PROVEN SAVINGS

We help you deliver projects more efficiently, no matter what challenges you're facing, just as we have for thousands of loyal customers.

- **Need to save materials?** Use reduced quantities or less expensive alternatives.
- **Need to reduce costs?** Save on initial and long-term costs with Tensar technology.
- **Need to save time?** Build more quickly and reduce the impacts of weather on your schedule.
- **Need to meet sustainability goals?** Reduce carbon footprint and other community impacts.

PROVEN TECHNOLOGY

Twelve global teams and over 10,000 hours of R&D have led to the development of InterAx, our highest performing geogrid to date.

- Optimized geometry for maximum confinement of granular fill, creating the most efficient stabilized layer.
- Advanced material science to improve compaction and restrict movement over time, retaining the stiffness long term and further enhancing performance.
- Easy-to-use, award-winning software saves you time and effort, while ensuring your designs are reliable and deliver the expected results.

Together
we can
Design and
Build with
Confidence™

With Tensar, you can design and build with confidence because we **empower you to achieve cost-effective, proven, engineered solutions.** Fueled by an innovative spirit, our industry-leading technology solves the toughest soil stabilization, earth reinforcement, and site development challenges.
